Weekly Coal Production

Production for Week Ended:
July 8, 1989

Preface

The *Weekly Coal Production (WCP)* report provides weekly production estimates of U.S. coal by State, as well as supplementary data which are usually published twice a month. The Coal Exports and Imports Supplement contains annual as well as detailed monthly data on U.S. coal and coke exports and imports. This week's supplement contains detailed monthly data covering electric utility coal consumption, stocks, and receipts (quantity and price).

This publication is prepared by the Coal Division; Office of Coal, Nuclear, Electric and Alternate Fuels; Energy Information Administration (EIA) to fulfill its data collection and dissemination responsibilities as

specified in the Federal Energy Administration Act of 1974 (P.L. 93-275) as amended. *Weekly Coal Production* is intended for use by industry, press, State and local governments, and consumers. Other publications that may be of interest are the quarterly *Coal Distribution Report*, the *Quarterly Coal Report*, *Coal Production 1987*, and *Coal Data: A Reference*.

This publication was prepared by Wayne M. Watson under the direction of Mary K. Paull and Noel C. Balthasar, Chief, Data Systems Branch. *Questions on energy statistics should be directed to the National Energy Information Center (NEIC) at (202/586-8800).*

Summary

U.S. coal production in the week ended July 8, 1989, as estimated by the Energy Information Administration, totaled 11 million short tons. This was a 21 percent decrease from production in the previous week. Production east of the Mississippi declined 3 million short tons, while production west of the Mississippi declined only slightly. The lower level of production primarily reflects: 1) the Independence Day holiday; 2) continued regional wildcat strike activities; and 3) the second week of the United Mine Workers of America members' vacation period.

Coal production in the week ended July 8, 1989 was 3 percent lower than in the comparable period in 1988, which also included the miner's vacation period and the Independence Day holiday.

Coal consumption at electric utility plants in April 1989 was down by 6 million short tons from the March 1989 level, with the largest declines occurring in the East North Central and Mountain Census Divisions. However, cumulative coal consumption for the first 4 months of 1989 was 5 million short tons higher than in the comparable period in 1988.

Coal stocks at electric utilities on April 30, 1989 were 6 million short tons higher than on March 31, 1989 but were 21 million short tons lower than on April 30, 1988. Electric utility month-end stock levels have risen each month since January.
